

Rhino Homes Ltd

Model Build Specification

Structural Shell Cost Estimate (Raw Materials Only)

The Rhino Homes model is based on constructing a large, traditional family home using standardised designs, bulk purchasing agreements and wholesale procurement. This estimate covers **raw construction materials only** and excludes labour, plant hire, utilities, professional fees, internal fittings, land and developer overheads.

The objective is to minimise material costs through direct purchasing from manufacturers and long-term supply contracts.

Model House

- Four to five bedrooms
- Three bathrooms
- Two reception rooms
- Open-plan kitchen and dining room
- Utility room
- Integral garage
- Traditional brick or stone exterior
- Pitched tiled roof
- Approximately 180–200 m² (1,950–2,150 sq ft)

Structural Materials Budget

Component	Estimated Cost
Foundations (concrete, rebar, drainage materials)	£3,200
Brickwork / Stonework (external walls, blockwork, lintels)	£7,500
Roof Structure (timber trusses, membrane, battens)	£2,800
Roof Covering (tiles/slates, ridge tiles, fixings)	£1,400
External Works (brick ties, insulation, damp-proof courses, gutters, fascias, soffits and other external structural materials)	£1,800

Total Raw Structural Materials

£16,700 per house

Scope of Estimate

This £16,700 estimate represents the **external structural shell** of the property and includes only the principal building materials required to construct the weatherproof exterior.

It **does not include**:

- Labour
 - Groundworks machinery
 - Internal walls
 - Plumbing
 - Electrical installation
 - Windows and external doors
 - Kitchens and bathrooms
 - Plastering and decoration
 - Flooring
 - Heating systems
 - Landscaping
 - Utility connections
 - Professional fees
 - Planning costs
 - Land acquisition
 - Developer finance
-

Rhino Bank Procurement Strategy

Rhino Homes would seek to achieve this target through:

- National wholesale purchasing agreements
- Direct procurement from brickworks and quarries
- Bulk cement and concrete contracts
- Long-term timber supply agreements
- Standardised architectural designs
- Just-in-time material delivery
- Regional distribution hubs
- Economies of scale across multiple housing developments

By separating raw material procurement from labour and development costs, Rhino Bank aims to establish a repeatable, cost-controlled construction model capable of delivering high-quality traditional homes at scale while maintaining consistent quality and supply chain resilience.
